Our 17 year history assures best practice in privacy, security and the ethical use of data

Privacy

- We have built our business based on privacy by design principles for the past 17 years
- Quantum has strict protocols around the receipt and storage of personal information
- All information is de-identified using an irreversible tokenisation process with no ability to re-identify individuals.

Security

- We are ISO27001 certified - internationally recognised for our ability to uphold best practice standards across information security
- We use 'bank grade' security to store and process our data
- Comply with 200+ security requirements from NAB, Woolworths and other data partners
- All partner data is held in separate restricted environments
- All access to partner data is limited to essential staff only
- Security environment and processes regularly audited by our data partners.

Ethical use of data

Applies to all facets of our work, from the initiatives we take on, the information we use and how our solutions impact individuals, organisations and society.

We all have a responsibility to use data for good

Quantum believes in using data for progress, with great care and responsibility. As such please respect the commercial in confidence nature of this document.

Executive summary

01

Task 1

Mainstream Young & Midage Singles/Couples are chips' highest-value growth segment - a large, price-tolerant customer base that over-indexes on premium brands and larger pack sizes.

02

Task 2

2 of the 3 trial stores achieved a statistically significant sales uplift during the trial, driven by more customers visiting - not higher spend per visit - supporting a wider rollout of the new layout.

01

Category

Sales are concentrated in five segments, led by Budget families and Mainstream young singles/couples

Older Families, Retirees, and Older Singles/Couples (all Budget or Mainstream) are the top 3 revenue segments.

Budget Older & Young Families drive sales through volume - about 9 units bought per customer, well above the category average.

Mainstream Young Singles/Couples drive sales through customer count: over 8,000 customers, the largest single segment.

New Families is the smallest segment by total sales across every affluence tier.

Mainstream Young & Midage Singles/Couples over-index on premium brands and larger packs

20-25% more likely than other customers to buy Tyrrells, Twisties, and Doritos - brands positioned at the premium end of the category.

Average pack size purchased is 178g vs. 175g across the rest of the customer base - a small but consistent lean toward larger packs.

This combination (willingness to pay + large customer base) makes this segment the clearest opportunity for premium-range and larger-pack promotion.

Budget and Mainstream customers each make up roughly a third of every life stage's customer base

No single life stage is dominated by one affluence tier - Budget, Mainstream, and Premium customers are present in similar proportions almost everywhere.

Young Singles/Couples is the exception - Mainstream customers are a clear majority, reinforcing it as a distinct, high-potential segment rather than an average one.

02

Trial store performance

Control stores were matched on pre-trial sales and customer trends, not assumed by location

Each trial store was scored against every other complete-history store on pre-trial (Jul 2018-Jan 2019) sales and customer-count trends, combining trend shape (correlation) and scale (magnitude distance).

Store 77's best match (store 233, shown left) tracked it closely for 7 straight months before the trial began - a strong basis for comparison.

Match quality varied: stores 77 and 86 found strong matches (0.94-0.97); store 88's best match was weaker (0.80), which affects confidence in its result.

The trial layout drove a significant, customer-led sales uplift at 2 of 3 stores

Store 77: significant uplift in March (+37%) and April (+62%), driven by +23.5% more customers - not higher spend per visit.

Store 86: significant uplift in March (+32%) only; worth investigating why it didn't sustain through April.

Store 88: no month reached significance - but its control-store match was the weakest of the three, so this should read as inconclusive, not as a failed trial.

Recommendation: proceed toward a wider rollout, prioritising the layout elements common to stores 77 and 86, and re-test store 88 with a stronger control match.
